Chapter 1

Introduction

1.1 What is P vs NP problem

The P vs NP problem is a very famous problem in computer science. The problem can basically be described as following: if a computer is able to check the answer to a problem can that computer actually solve said problem?[1] P problems can be solved faster by computers than NP problems and are termed as "easy" problems, NP problems are "easy" for a computer to check but are not "easy" for a computer to solve.[1]

1.2 Analysis of project

1.3 Outline of chapters

Chapter 2

Researching the problem

Chapter 3

Analysis of Papers
